Wooden Sticks

Plywood is a composite material manufactured from thin layers, or "plies", of wood veneer that are glued together with adjacent layers, having both glued with each other at right angle or at 90 degrees angle

It is an engineered wood from the family of manufactured boards, All plywoods bind resin and wood fibre sheets (cellulose cells are long, strong and thin) to form a composite material. This alternation of the grain is called cross-graining and has several important benefits: it reduces the tendency of wood to split when nailed at the edges

*Fevicol Marine
Ever thought of a water-resistant adhesive that would offer a strong bond? Fevicol Marine is the ideal choice to make! It offers water resistance up to five days.

So, do not worry about your terrace chairs or bathroom cupboards, anymore!

Sofa sets will be one of the most expensive items in your living room after eliminating gadgets and equipment. Purchasing beautiful items won't be a mistake because they last for years or even decades.

Top quality furniture is intense and composed of materials that will last many years, giving you years of use. They also improve the house's theme and appearance.

Furniture hardware are those products that are used to support the furniture look, design and durability. Furniture hardware products include furniture frames, furniture legs, furniture arms, etc.

Furniture hardware is the fixings, fittings and individual pieces needed to create a working, durable piece of furniture. Table legs and shelf brackets for example, are pieces of furniture hardware that manufacturers will purchase separately (often in bulk) to build their perfect item of furniture.

Acrylic is a transparent plastic material with outstanding strength, stiffness, and optical clarity. Acrylic sheet is easy to fabricate, bonds well with adhesives and solvents, and is easy to thermoform

It has superior weathering properties compared to many other transparent plastics.

veneer refers to thin slices of wood and sometimes bark that typically are glued onto core panels (typically, wood, particle board or medium-density fiberboard) to produce flat panels.

The way wood veneers are made gives them many advantages over traditional solid wood.
